ISOMETRIC™

SIGNATURE YONEX TECHNOLOGY SINCE 1980

7% LARGER SWEET SPOT

Developed over 30 years ago, the ISOMETRIC™ design increases the sweet spot by 7%*. Compared to a conventional round frame, a square-shaped ISOMETRIC™ racquet generates a larger sweet spot by optimizing the intersection of the main and cross strings. ISOMETRIC™ technology delivers greater control without sacrificing power.

ISOMETRIC™ is a trademark of Yonex Co., Ltd.

OVAL PRESSED SHAFT

O.P.S.
Oval Pressed Shaft

First introduced in 1969 with the T-7000 - our first aluminum tennis racquet - the Oval Pressed Shaft (OPS) is still incorporated into our most popular racquet series today. The Oval Pressed Shaft is designed to give players more spin, control, and feel. The shaft flexes at impact, increasing dwell time and minimizing vibrations.

REVOLUTIONARY GRAPHITE

Staying true to our roots, our graphite is sourced and engineered in Japan, giving our research and development team the opportunity to utilize a wide range of materials that suits players of all levels.

Aggressive, attacking spin for pinpoint control is achieved through a carbon nanotube structure that binds the graphite fibers together, which reduces energy loss. Due to its resilient properties, the material flexes and provides quick snapback.

Namd is technology developed by Nitta Co., Ltd. to uniformly disperse carbon nanotubes in carbon fiber composites.

Designed to produce flex and power, 2G-Namd Speed is developed from high modulus graphite fibers bound with CNTs, resulting in a material that transfers energy into quick snapback.

Namd is technology developed by Nitta Co., Ltd. to uniformly disperse carbon nanotubes in carbon fiber composites.

VIBRATION DAMPENING MESH

VDM
Vibration Dampening Mesh

First used in our snowboards to reduce vibrations at impact, Vibration Dampening Mesh (VDM) is now used in four of our racquet series. VDM is a stretchy mesh material that is wrapped around the graphite within the grip to filter unwanted vibrations and improve touch and precision.

EZONE

The award-winning EZONE series just got better.

The new 7th-generation EZONE series upgraded with easy power and an improved plush and sweeter feel. This series is suitable for the widest audience, featuring models ranging for everyone from juniors, recreational players, to the top players in the world.

AERO SHAPE DESIGN

FOR A PLUSH FEEL
A tapered frame design with a thinner frame face results in a softer racquet.

OVAL PRESSED SHAFT (OPS)

ADDED SPIN, CONTROL, AND FEEL
First introduced in 1969, the Oval Pressed Shaft flexes at impact to increase dwell time and minimize vibrations.

SHAFT DESIGN

FOR IMPROVED STABILITY AND POWER
A thicker shaft structure with a convex design reduces unwanted racquet torque on off-centered shots for added power.

2G-Namd™ SPEED

IMPROVED FEEL AND BALL SPEED
2G-Namd™ Speed graphite provides enhanced ball speed without sacrificing comfort.

VIBRATION DAMPENING MESH (VDM)

FOR ADDED TOUCH AND PRECISION
A stretchy mesh material is wrapped around the graphite within the grip to filter unwanted vibrations.

VCORE PRO

STAN WAWRINKA (SUJ)

DAYANA YASTREMSKA (UKR)

Everyone talks about improving control, but what does **more** control look like? More control means controlling the ball in every aspect of your game – from ball trajectory, speed, spin, bounce, and ball placement – so you can control the outcome of the game.

The 3rd-generation VCORE PRO provides accuracy and a refined feel for players looking for more control. With improved materials and technologies, as well as the longest shaft in Yonex history, the new VCORE PRO provides improved accuracy and speed by increasing the flex and snapback.

FLEXCON SYSTEM

FOR RACQUET FLEX AND FEEL
A tapered and elongated box-frame shaft is composed of Flex Force and Flex Fuse graphite for precise control of the ball.

2G-Namd™ FLEX FORCE

FOR INCREASED BALL-POCKETING
Flex Force graphite allows the racquet to quickly flex and snapback for greater spin and faster ball acceleration off the string bed.

FLEX FUSE

FOR A SOFTER FEELING
A shock-absorbing polymer is integrated within the graphite's resin for increased racquet flex and a softer, more plush feeling.

VIBRATION DAMPENING MESH (VDM)

FOR ADDED TOUCH AND PRECISION
A stretchy mesh material is wrapped around the graphite within the grip to filter unwanted vibrations.

VCORE

ANGELIQUE KERBER (GER)

DENIS SHAPOVALOV (CAN)

The VCORE features a toolbox of spin waiting to be unlocked - heavy spin, attacking spin, topspin, backspin, side spin... every type of spin. Think of a fast, red car - speedy, slick, smooth - that's the 6th-generation VCORE.

New materials combine with innovation to increase string snapback and movement, giving players access to the most spin in Yonex tennis history. Yes, it has even more RPMs than the previous model*, producing trajectories your opponent has never seen before.

*Compared to the 5th-generation VCORE. Tested by Yonex.

STRING SYNC GROMMETS

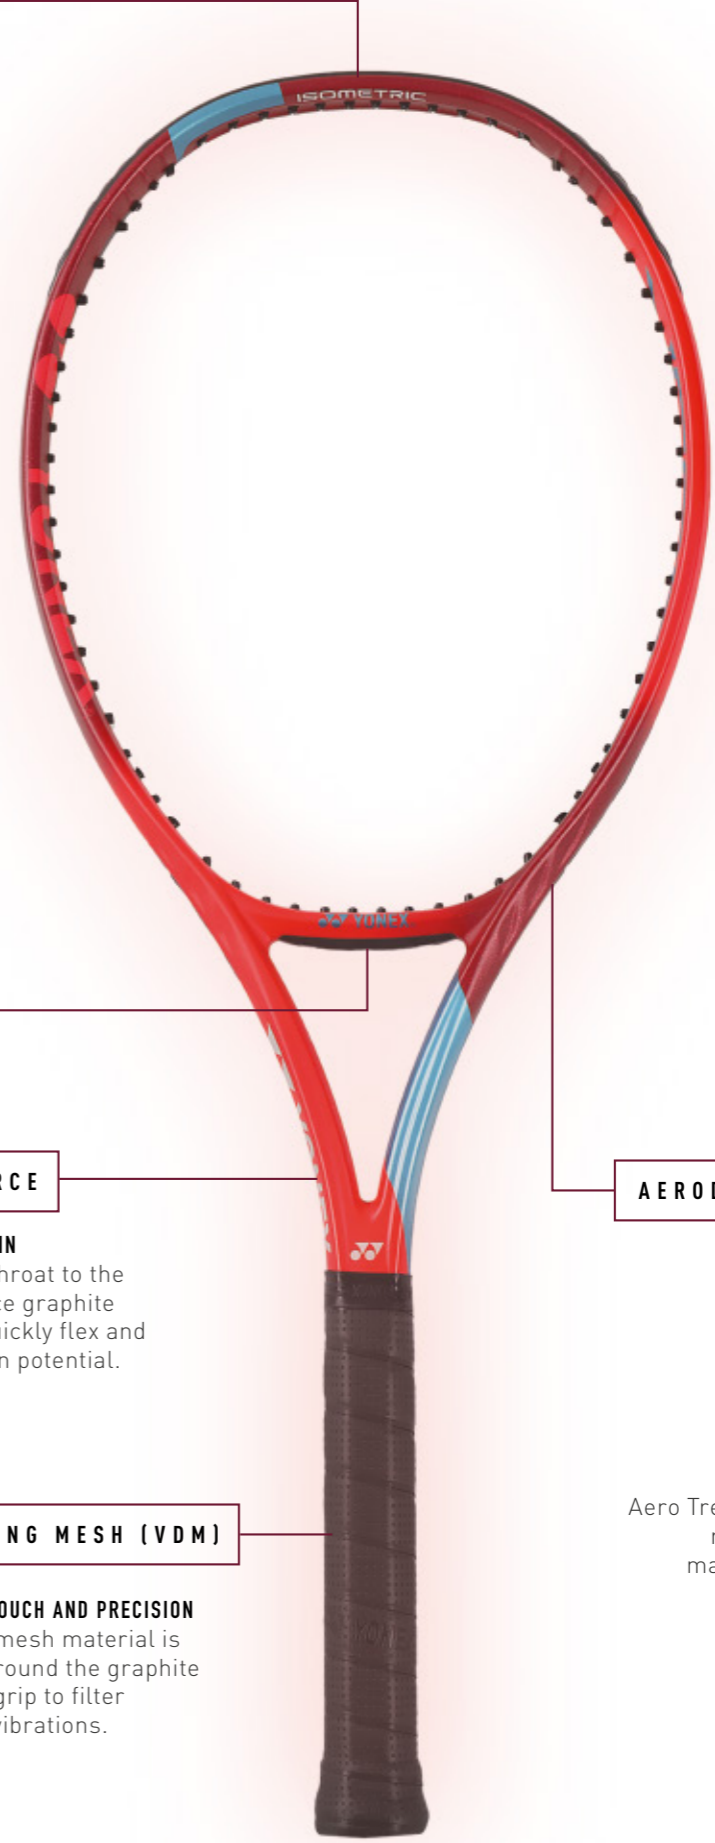

FOR BALL BITE AND SPIN
A thin grommet nozzle is inserted into a larger frame hole allowing the string to move together with the grommet for faster snapback.

LINER TECH

FOR MAXIMUM SPIN POTENTIAL
Newly engineered straight hole grommets allow more string movement on off-centered shots.

2G-Namd™ FLEX FORCE

FOR AGGRESSIVE, ATTACKING SPIN
Incorporated in the upper throat to the lower frame, new Flex Force graphite allows for the racquet to quickly flex and snapback for maximum spin potential.

AERODYNAMIC TECHNOLOGY

A FASTER FRAME FOR MORE SPIN
Aero Trench and Aero Fin Technology reduce air resistance for easy maneuverability and added spin.

VIBRATION DAMPENING MESH (VDM)

FOR ADDED TOUCH AND PRECISION
A stretchy mesh material is wrapped around the graphite within the grip to filter unwanted vibrations.
